

aquastar *CO₂-Set pro*

The iks aquastar CO₂ Set professional

This complete CO₂ set is available in two versions. One is the iks aquastar CO₂ Set professional fresh for freshwater aquariums and the other the iks aquastar CO₂ Set professional salt for seawater aquariums. Particular attention has been given to including in this set a high-quality pressure reducer with pressure piston valve and an integrated fine needle valve. This ensures a sensitive and very reliable means of fine adjustment, constituting the decisive advantage over a number of other systems. Another plus and elegant solution is the solenoid valve mounted directly on the pressure reducer. We always recommend adding CO₂ only with the aid of a control system. Particularly suitable for the purpose are the systems iks aquastar, iks aquastar midi and iks aquastar alpha pH. This is the only way of ensuring that the correct amount of CO₂ is administered to the aquarium's water. Without a system of control, an overdose will occur sooner or later which will kill fish. Avoid this loss. A system such as this can considerably reduce the consumption of CO₂ (cost savings). The various components are available individually as accessories.

Applications:

- Addition of CO₂ for better plant growth in freshwater aquariums
- Maintenance of a pH value between pH 6 and pH 6.5 in a lime reactor, the best means of introducing calcium into seawater aquarium water.

Included:

- 350 g CO₂ bottle
- a high-quality pressure reducer with pressure piston valve
- Solenoid valve (night-time shutdown)
- An attractively designed glass reactor with a bubble counter (only in iks aquastar CO₂ Set professional fresh) for aquariums up to 250 lt.
- Bubble counter (only in iks aquastar CO₂ Set professional salt)
- A PG 13.5 threaded connection point for attaching iks pH electrodes to lime reactors (only in iks aquastar CO₂ Set professional salt)
- A non-return valve
- 1.5 m flexible pressure tubing
