

# **iks** **aquastar** *vario 4 pro*

The 4-channel dosing unit iks aquastar vario 4 pro (item no. 2004)  
Perfect dosing

This dosing unit's ability to be connected directly to the iks aquastar and iks aquastar midi control units make it probably the most convenient to use, multi-channel dosing system for aquariums available on the market at the moment. It enables doses to be administered at any time and in any quantity. It is thus possible, for example, to add a liquid to the aquarium every hour in the easiest possible way. This allows the daily dose to be distributed evenly over a period of your choice (e.g. 8:00 a.m. to 8:00 p.m.). One of the great advantages of dosing continuously in this way over the methods employed by other dosing devices that commonly only add a single dose per day is, for example, the optimum utilisation of trace elements in a seawater aquarium. Each channel can be set individually. The smallest possible dose is approximately 0.6 ml. Practical: every channel can also be activated manually by means of a switch. This is especially useful when, for example, changing a bottle.

**Features:**

- Practical dosing of 1 to 4 liquids
- Extremely easy to use
- Manual activation e.g. after changing a bottle
- Easy replacement of tubing
